

## Ownership and maintenance costs

### Grants for home charging points

A Government grant could knock £350 off the cost of installing a charging station at your home.

+

### e:PROGRESS for optimal use of your money and energy

e:PROGRESS is Honda's intelligent home-charging solution. It's a great fit for your e:Ny1.

e:PROGRESS does all the thinking for you. It minimises your costs and energy use, and maximises your use of renewable energy.

Just plug your car in and let the e:PROGRESS mobile app connect your car and charger to save you time, carbon, and money.

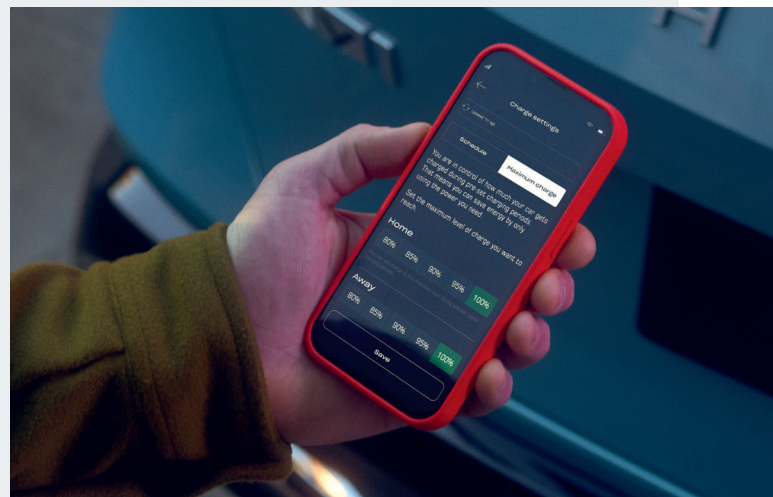

So long as you have a compatible charger and a Wi-Fi connection, e:PROGRESS will:

- + Choose the cleanest energy or lowest-cost time to charge your car, based on your departure time and preferences.
- + Charge to a preset minimum, then do the rest intelligently, based on your optimisation and preference settings.

If you're in a hurry to get away, you can switch at any time to 'charge now'.

e:PROGRESS works with all flat-rate and dual-rate tariffs, and all energy suppliers. To get the maximum benefit from intelligent charging, it's worth switching to Agile Octopus or a dual-rate EV tariff.

To find out more, visit e:PROGRESS online.

## Ownership and maintenance costs

### + Grants make home-charging easier

An OVEZ grant could cut the cost of installing a home charging station. The grant covers £350 or 75% of the cost of buying and installing a home charger, whichever is lower.

The grant gets its name from the Office for Zero Emission Vehicles (OVEZ), a Government team supporting the transition to zero-emission vehicles. The grant's official name is the Electric Vehicle Chargepoint Grant.

#### You may qualify for a grant if you:

- + Live in (a) a flat that you own or (b) a rented flat or house.
- + Have dedicated off-street parking.
- + Own, lease, or have use of an eligible electric or plug-in hybrid vehicle.
- + Have not previously claimed this grant or its predecessor.\*

#### Other restrictions and grant-winning opportunities:

- + You can claim only one OVEZ grant for each eligible vehicle or household.
- + Your landlord or property manager may be able to claim an additional grant to help build the infrastructure that you and your neighbours need. This grant provides up to £500 per residential parking bay (max 60 bays).
- + There are also grants to help businesses install EV infrastructure for staff and fleet parking.

#### Do you need permission?

Before you install a home charger, you may need permission from your freeholder, managing agent, neighbours, or local planning authority.

See *Honda EV Driver Tips 2.3* for info on planning permissions.

### + ULEZ scrappage grants

Although there are no grants specifically for the e:NY1, anyone who lives in London within the ULEZ boundary may qualify for a scrappage grant. If your current car doesn't meet the ULEZ standard – and you match the grant's eligibility criteria – you may be able to claim up to £2,000 for scrapping your car.

Even bigger grants are available for wheelchair-accessible vehicles: a payment of £10,000 to scrap your current car or £6,000 to retrofit it to the ULEZ standards.

Visit the Transport for London scrappage scheme website for more information.

\* The Electric Vehicle Chargepoint Grant replaced the Electric Vehicle Homecharge Scheme on 1 April 2022.
